

TAF-L-W

UNDERFLOOR DIFFUSER WITH FIN-TUBE
HEAT PLENUM

TAF-L-W is a fixed linear bar diffuser plenum for underfloor perimeter heating applications. The TAF-L-W's self-contained fin-tube heats the perimeter by utilizing the room air instead of the supply air. By allowing the denser cold air to flow into the TAF-L-W plenum while simultaneously inducing room air into the plenum, the TAF-L-W returns the warmer air to the window or exterior wall through natural convection. This model can also contribute toward achieving LEED Credits.

FEATURES & BENEFITS

- A fixed linear bar diffuser plenum for underfloor perimeter heating applications
- Designed to be integrated with the CT-TAF-L linear bar grille
- Drops into perimeter slot and sits on top of the raised floor tile (by others) and a perimeter angle
- Has a fin-tube assembly in the plenum
- Unit Size: 48" length
