- All pressures are in inches of water
- Isothermal throw values given are for terminal velocities of 150, 100 and 50 fpm
- Each NC value represents the noise criteria that will not be exceeded by the sound pressure in any of the octave bands, 2 through 7, with a room absorption of 10dB, re 10<sup>-12</sup> watts
- The tests were conducted with the FlowBar and plenums as a composite assembly
- Data obtained from tests conducted in accordance with ASHRAE Standard 70-2006 "Method of Testing for Rating the Performance of Air Outlets and Inlets"

- Plenums not provided by Titus may demonstrate performance variations from data published by Titus. Titus can not guarantee performance if a factory engineered plenum is not provided.
- Throw values for HighThrow units are based on a one-way discharge from the slot
- Throws listed are for one-way air pattern. For divided airflow, select the airflow in each direction according to the number of slots aimed in that direction, with the total airflow apportioned between slots. See section Engineering Guidelines and the topic 'Procedure to Obtain Catalog Throw Data' for throw information.
- For continuous lengths it is recommended that maximum active lengths are no longer than 10 feet
