

## EG (S, L)

- Equalizes the airflow into the branch duct or diffuser neck. Also gives directional control of airflow. Specially designed Titus airfoil vanes give maximum control with minimum noise and turbulence.
- The vanes are individually adjustable, with friction pivots to hold the desired settings
- The suffix "S" or "L" denotes vanes parallel to the short or long dimension

air balancing

### MODELS:

EG-S

EG-L / For Square & Rectangular Necks

### FINISHES:

Standard Finish - #84 Black

Optional Finish - #04 Mill

See website for Specifications

## OVERVIEW

### Equilizing Grid

Effective air balancing begins with the balancing provisions that are designed into the HVAC system. Titus balancing devices are easy to select and specify. They are designed for quick access and adjustment and are engineered for the least possible noise, turbulence and air resistance. Titus makes available published flow factors for all Titus diffusers. This allows precision balancing to be performed in the field with accuracy based on prior test results.
