Frustrated with having to manually calculate heater capacities to determine appropriate airflow and kW for the zone while meeting ASHRAE guidelines for ΔT , comfort and energy?

The Titus Lynergy™ heater allows you to free yourself from electric heat calculations and simply specify leaving air temperature. By specifying leaving air temperature, you can ensure your designs meet ASHRAE guidelines for maximum ΔT during heating to provide the most comfortable zone. The Lynergy proportional modulating electric heater also eliminates over and under heating of the zone which can result in uncomfortable spaces and wasted energy. Patents - <http://jcipat.com>
