NOTES:

- A web-based Computer Selection Program, “Selection software,” is available to facilitate the selection process. Contact your representative to obtain access to this powerful and time-saving program.
- Some drawings are not shown in this catalog.
- All data herein is subject to change without notice.
- Drawings not for installation purposes; refer to IOM manual.
- cETLus Report Number 539840.
- Content not for contractual purposes; use Selection software output and separate construction submittal drawings located on web

FEATURES AND BENEFITS

HIGH PERFORMANCE

Titus THB Series horizontal low profile fan coil units are designed to maximize flexibility of selection and installation.

The units are also designed to exceed the stringent quality standards of the institutional market, while remaining cost competitive in the light commercial segment of the market.

Titus horizontal fan coil units set the standards for quality, flexibility, and competitive pricing.

DESIGN FLEXIBILITY

The extensive variety of standard options available on the THB Series units are where you find the versatility to fit any HVAC system designer's needs.

Options include: rear or bottom return, rear ducted return, solid or telescoping bottom panels for unit recessing, single wall stainless steel drain pans, electric heat and condensate pumps with single point power connection. All electric heat units are listed with cETLus as an assembly and carry the cETLus label.

Units comply with the latest edition of AHRI Standard 440 for testing and rating fan coil units, are certified, and display the AHRI symbol.

High Efficiency motors, fan relays, disconnects and fusing mean easier coordination between mechanical and electrical trades.

Coil options allow for 2 through 6 row chilled water or 2 through 5 row DX cooling coils. One or two row hot water or standard steam coils may be placed in the preheat or reheat position.

Silent solid state relays are available for electric heat control in sound sensitive environments.

High static ECM option provides versatility and adjusts for applications that exceed .25" of external static pressure.

CONVENIENT INSTALLATION

THB Series fan coil units are shipped completely assembled, reducing field installation time and labor. All units are thoroughly inspected and tested prior to shipment, reducing potential problems at startup. Motor wiring is brought to a junction box on the outside of the unit casing, reducing electrical hook-up time.

THB Series fan coil units have an electrical enclosure on the side of the unit. The expansive compartment allows for easy access to electrical components, terminal blocks and wiring.

Factory furnished valve packages assure proper fit, operation and performance.

QUALITY PRODUCT

Concealed Model THB Series fan coil units are built from galvanized steel. Exposed Model THBE cabinetry is powder coated galvanized steel.

Standard insulation is 3/8" elastomeric closed cell foam, complying with UL 181 and NFPA 90A.

Units, with or without electric heat, are cETLus listed and labeled. All wiring is in compliance with NEC.

THB Series fan coil units have a removable fan assembly. The entire fan assembly can be removed from the unit and serviced easily on a workbench.

CONSTRUCTION FEATURES

MODEL THBP

THB Series fan coils have many standard and optional features which are unique to the industry (see page 6 for a complete listing).

MODEL THBE

Horizontal Exposed Cabinet

MODEL THBC

Horizontal Free Return

CONSTRUCTION FEATURES

MODELS THBC / THBP / THBE

ELECTRICAL ENCLOSURE

The bottom access electrical enclosure with additional side access provides access to a spacious electrical compartment. This compartment houses electric heat and control components. Terminal strips are furnished for simple power and control wiring connections. Multiple knockouts allow wiring entries from either side of the compartment.

DRAIN PAN

The THB Series drain pan is easily removable for cleaning, utilizing a patent-pending tool-free design. Standard drain pans are single wall galvanized steel with an option for stainless steel. Drain pans are available with secondary drain connection. All drain pans are externally insulated with closed cell foam.

FILTERS

One inch throwaway filters are tight fitting to prevent air bypass. Filters are easily removable from the bottom of the unit.

COILS

All fan coils are available in 2 or 4 pipe configurations. The heating coil may be placed in the reheat or preheat position. Heating and cooling coils are available with right, left or opposite side connections.

TELESCOPING BOTTOM PANEL

The telescoping bottom panel allows for fully recessing the unit while permitting service access into the ceiling plenum. The architectural ceiling panel is finished with a durable powder coat paint.

FAN DECK

The fan assembly is easily removed without disconnecting the ductwork for service access to motors and blowers at, or away from the unit.

STANDARD AND OPTIONAL FEATURES

STANDARD FEATURES

Construction

All Units

- AHRI 440 certified and labeled
- 3/8" elastomeric closed cell foam insulation
- Galvanized steel construction
- 1 1/2" duct discharge collar
- Four point hanger mounting brackets

Plenum units

- Integral filter rack with 1" throwaway filter
- Integral rear return

Exposed units

- Stamped louver supply and return air grilles
- Durable powder coat paint
- 18 gauge bottom panel construction

Coils

- Cooling - 2 to 6 row chilled water or 2 to 5 row DX, heat pump compatible
- Heating - 1 or 2 row hot water or steam – reheat or preheat position
- 6 total rows of cooling and heating coils maximum
- 3/8" coil tube diameter
- 10, 12 or 14 fins per inch
- High efficiency aluminum fin surface for optimizing heat transfer and air pressure drop
- Left or right hand, same or opposite side connections on four pipe systems
- Access to entering and leaving air sides for cleaning
- Removable for service
- Manual air vents

Drain Pans

- Single wall, galvanized steel, externally insulated – fire retardant and antimicrobial
- Double sloped to drain connection
- Tool-free removal
- 7/8" primary drain connection

Fan Assemblies

- Forwardly curved, DWDI centrifugal type
- 115 volt, single phase, three speed PSC motors
- Quick disconnect motor connections
- Removable fan/motor deck for service

Electrical

- cETLus listed for safety compliance
- Electrical junction box for field wiring terminations

Electric Heat

- cETLus listed as an assembly for safety compliance
- Integral electric heat assembly with removable elements for easy service
- Automatic reset primary and back-up secondary thermal limits
- Single point power connection

OPTIONAL FEATURES

Construction

All units

- Rubber isolated hanger brackets

Plenum units

- Bottom return
- Rear ducted return
- 1" pleated filters (MERV 8 & 13)
- Spare 1" throwaway filters
- Telescoping bottom access panels

Exposed units

- 1" pleated filters (MERV 8 & 13)
- Double deflection discharge grille
- Ducted supply and/or return

Coils

- 1/2" coil tube diameter
- Automatic air vents
- Stainless steel coil casings

Drain Pans

- Stainless steel construction with external insulation
- 5/8" secondary drain connection
- Auxiliary drip pans, galvanized or stainless steel

Condensate Pump

- Single point power
- Plenum rated
- Maintenance free
- Quiet operation

Piping Packages

- Factory assembled – shipped loose for field installation
- Unit mounted - shipped from factory with structural supports
- 1/2" and 3/4", 2 way and 3 way normally closed, two position electric motorized valves
- Floating point modulating control valves
- 0-10V proportional control valves
- High pressure close-off actuators (125 PSIG)
- Isolation ball valves with memory stop
- Fixed flow control devices
- Unions and P/T ports
- Y strainer with blowdown

Thermostats

- Remote mounted analog, digital display or programmable
- 2 and 4 pipe control sequences
- Automatic and manual changeover
- Integral three speed fan switches
- 24V floating point control
- 0-10V proportional control

Fan Assemblies

- 208-230 & 277 volt, single phase, three speed PSC motors
- 115, 208-230 & 277V, single phase, three speed EC motors
- 115, 208-230 & 277V, single phase, high static three speed EC motors
- 115, 208-230 & 277V, single phase, variable speed EC motors

Electrical

- SCR fan speed controller (high speed only)
- Integrated circuit board with fan relays and on board transformer
- Toggle disconnect switch
- Condensate overflow switch (drain pan)
- Main fusing
- Unit and remote mounted 3-speed fan switches
- Freezestat
- Dirty filter switch
- Discharge air temperature sensor

Electric Heat

- Door interlocking disconnect switch
- Main fusing
- Silent relay/contactors

COILS, UNIT WEIGHTS

COILS

Titus® offers hot water, chilled water, direct expansion (DX), and standard steam coils for specific application with all THB Series Fan Coil Units.

STANDARD FEATURES

- Cooling - 2 to 6 row chilled water or 2 to 5 row DX
- Heating - 1 or 2 row hot water or steam
- 6 total rows of cooling and heating coils maximum
- Multiple circuiting options
- 10, 12 or 14 fins per inch
- High efficiency aluminum fin surface for optimizing heat transfer and pressure drop
- Left or right hand, same or opposite side connections
- Manual air vents

OPTIONAL FEATURES

- Automatic air vents
- Stainless steel coil casings
- DX coils are heat pump compatible

Titus offers selection software, the industry's first web-based fan coil rating and selection program for complete unit, coil and sound selection. Contact your representative for more information.

ELECTRIC HEAT

Titus® offers electric heating coils with THB Fan Coil units. This allows the flexibility to provide an unrivaled amount of electric heat options in one complete package.

STANDARD FEATURES

- cETLus listed as an assembly for safety compliance
- Single point power connection
- Mounted in preheat position
- Automatic reset primary and back-up secondary thermal limits
- Internal wiring rated at 105°C
- Integral electric heat assembly with removable element for easy service
- Stainless steel terminals and hardware

USEFUL FORMULAS

$$\text{kW}^* = \frac{\text{CFM} \times \Delta T \times 1.085^{**}}{3413}$$

$$1\emptyset \text{ AMPs} = \frac{\text{kW} \times 1000}{\text{Volts}}$$

* 1kW = 3413 BTU/H

** Capacity at sea level

Altitude Considerations:

Reduce by 0.034 for each 1000 ft. of altitude above sea level.

Example: 5000 ft./1000 ft. = 5

$5 \times 0.034 = 0.17$

$1.085 - 0.17 = 0.915$

OPTIONAL FEATURES

- Silent solid state relays
- Manual reset secondary limits
- Door interlocking disconnect switch
- Main fusing (Branch fusing for EH>48 amps)

ELECTRICAL CALCULATIONS INFORMATION

1. Refer to MCA/MOP calculator at www.Titus.com for MCA and/or MOP calculations.
2. Non-Fused Door Interlock Disconnect Switch shall be sized according to MCA.
3. Fused Door Interlock Disconnect Switch and Main Fusing shall be sized according to MOP.

	277	3.6	5.4	7.2	10.8	14.4	18.1	21.7	25.3	28.9	32.5	36.1	43.3

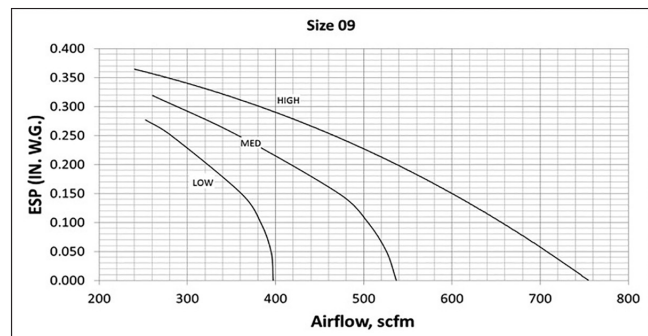

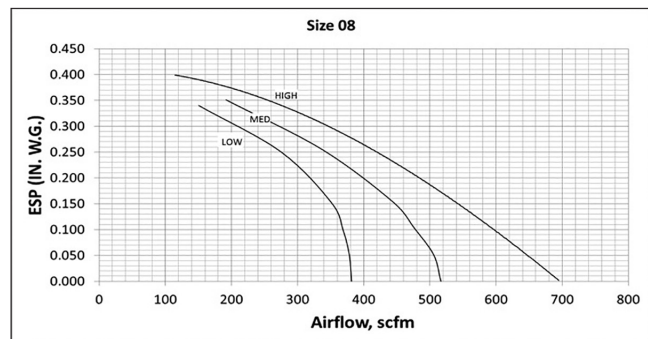

NOTES:

1. Shaded areas of the electric heat selection chart indicate kW and voltage options not available.
2. Available voltages are single phase, 60 hertz.
3. Size heater for Leaving Air Temperature (LAT) less than 104°F.
4. Silent, solid state heater relay is available for sound sensitive environments.
5. Ask your Titus® representative about continuously modulating electric heat using SSR and special control options.
6. 70 CFM of airflow must be maintained per 1 KW of electric heat to prevent nuisance tripping of limit switches.

FAN PERFORMANCE CURVES (PSC Motors)

1. Fan curves on the following pages depict actual performance of each motor tap without any additional fan balance adjustment. Units should not be run prior to installation of downstream ductwork; otherwise, damage to the motor may result.
2. Titus Fan Coil Units are equipped with permanent split-capacitor (PSC) motors with three taps (High, Medium and Low) which provides variable horsepower outputs.
3. Fan curves include pressure losses for cabinet, a 3/8" 12 FPI 3 row coil, and a clean 1" throwaway filter. For other coil configurations, use Selection software* to generate performance curves.
4. See pages 13-14 for fan motor electrical data.
5. For additional high static pressure applications and rating points, use Selection software to generate performance curves.
6. For other models use Selection software to generate performance curves.

NOTES:

1. Motor electrical data is nameplate data.
2. Watts are based on an THBC with PSC motor, 3 row coil, 12FPI, 0.05" ESP at 115V.
3. PSC motors are not available in 208-277V on SZ02 and SZ03.
4. Motor data is subject to change and should not be used for submittal purposes. Refer to Selection software submittal for actual ratings.

FAN PERFORMANCE CURVES (EC MOTORS)

1. Fan curves on the following pages depict actual performance of each motor speed without any additional fan balance adjustment. Units should not be run prior to installation of downstream ductwork; otherwise, damage to the motor may result.
2. Fan curves shown are for the 3 speed EC motors with factory programmed high, medium and low speeds. For high static or variable speed EC options see Selection software[®] to generate performance curves.
3. Fan curves include pressure losses for cabinet, a 3/8" 12 FPI 3 row coil, and a clean 1" throwaway filter. For other coil configurations, use Selection software[®] to generate performance curves.
4. See page 16 for electrical data.
5. For other models use selection software to generate performance curves.

4. Drain piping should be routed through casing opening indicated to provide proper slope.
5. Bottom panel removable for access to filter and fan assembly.
6. Corner panels are removable to access electrical enclosure, coil and valve pack.
7. Internal insulation of field piping may be required.
8. Field piping casing penetrations must be cut in the field to match individual job requirements.
9. All dimensions also apply to units with Electric Heat Only.

GUIDE SPECIFICATIONS

GENERAL

Furnish and install Titus Model RBH Horizontal Direct Drive Fan Coil Units where indicated on the plans and in the specifications. Units shall be completely factory assembled, tested and shipped as one piece. Units shall be capable of meeting or exceeding the scheduled capacities for cooling, heating and air delivery. Unit dimensions for each model and size shall be considered maximums. Units shall be cETLus listed in compliance with UL/ANSI Standard 1995, and be certified as complying with the latest edition of AHRI Standard 440.

CONSTRUCTION

Unit chassis shall be fabricated of galvanized steel panels. Exterior panels shall be insulated with 3/8" thick elastomeric closed cell foam insulation. Insulation shall conform to UL 181 for erosion and NFPA 90A for fire and smoke, and comply with a 25/50 Flame Spread and Smoke Developed Index per ASTM E-84 or UL 723. Additionally, insulation shall comply with Antimicrobial Performance Rating of 0, no observed growth, per ASTM G-21. Polyethylene insulation is not acceptable.

Ducted units shall have a minimum 1-1/2" duct collar on the discharge. Plenum and exposed units shall have a minimum 3/4" duct collar on the return.

Exposed units shall have exterior panels fabricated of galvanized steel. The fan and filter bottom access panel shall be attached with quarter turn quick open fasteners to allow for easy removal and access for service.

Unit mounting shall be by hanger brackets provided at four locations.

PAINTED FINISH

Painted cabinet exterior panels shall be finished with a heat cured anodic acrylic powder paint of the standard factory color.

SOUND

Ducted units shall have published sound power level data tested in accordance with AHRI Standard 260-2012. Exposed units shall have published sound power level data tested in accordance with AHRI Standard 350-2015 (non-ducted equipment).

FAN ASSEMBLY

Unit fan shall be a dynamically balanced, forwardly curved, DWDI centrifugal type constructed of 18 gauge zinc coated galvanized steel for corrosion resistance. Motors shall be high efficiency, permanently lubricated sleeve bearing, permanent split-capacitor type with UL and CSA listed automatic reset thermal overload protection and three separate horsepower taps. Single speed motors are not acceptable.

The fan assembly shall be easily removable for servicing the motor and blower at, or away from the unit. The entire fan assembly shall be able to come out of the unit by removing two screws and unplugging the motor. Plenum unit fan assemblies shall be easily serviced through an access panel in casing.

Devices used to energize and de-energize (switch) fan speeds must be silent. Magnetic, mercury, and/or quiet relays and/or contactors are not acceptable.

Option: Provide Electronically Commutated (EC) Motor capable of operation with low voltage 3 speed thermostat. Motor shall come factory programmed and configured for 3 speed operation.

Option: Motor shall be capable of accepting a 2-10 VDC output from BAS.

Option: Provide an electronic (SCR) fan speed controller as an aid in balancing the fan capacity. The speed controller shall have a turn down stop to prevent the possibility of harming the motor bearings, and incorporate electrical noise suppression to minimize noise on the incoming power lines.

GUIDE SPECIFICATIONS

COILS

Cooling and heating coils shall optimize rows and fins per inch to meet the specified capacity. Coils shall have seamless copper tubes and shall be mechanically expanded to provide an efficient, permanent bond between the tube and fin. Fins shall have high efficiency aluminum surface optimized for heat transfer, air pressure drop and moisture carryover.

Each coil shall be pressured to 450 PSIG and rated for a maximum of 450 PSIG working pressure.

Steam coils shall be standard steam type suitable for air temperatures above 35°F and 15 PSIG maximum working pressure.

Option: Coil casing shall be fabricated from Stainless Steel.

Coils shall be provided with a manual air vent fitting to allow for coil venting.

Option: Provide automatic air vents in lieu of manual air vents.

Heating coils shall be furnished in the reheat or preheat position on units with chilled water coils, or in the reheat position for DX coils.

DRAIN PANS

Primary condensate drain pans shall be single wall, galvanized steel for corrosion resistance, and extend under the entire cooling coil. Drain pans shall be of one-piece construction and be double sloped for condensate removal.

Drain pans shall be fully removable without the use of any tools.

The drain pan shall be externally insulated with a fire retardant, closed cell foam insulation. The insulation shall carry no more than a 25/50 Flame Spread and Smoke Developed Rating per ASTM E-84 and UL 723 and an Antimicrobial Performance Rating of 0, no observed growth, per ASTM G-21.

Option: Provide a single wall primary drain pan constructed entirely of stainless steel for superior corrosion resistance. Stainless steel drain pans shall be externally insulated.

Option: Provide a secondary drain connection on the primary drain pan for condensate overflow.

FILTERS

Plenum and exposed units shall be furnished with a minimum 1" nominal glass fiber throwaway filter. Filters shall be tight fitting to prevent air bypass. Plenum unit filters shall be easily removable from the bottom of the unit without the need for tools.

Option: Provide unit with 1" pleated filter (MERV 8).

Option: Provide unit with 1" pleated filter (MERV 13).

ELECTRICAL

Units shall be furnished with single point power connection. Provide an electrical junction box for motor and other electrical terminations.

GUIDE SPECIFICATIONS

ELECTRIC HEAT

Furnish an electric resistance heating assembly as an integral part of the fan coil unit, with the heating capacity, voltage and kilowatts scheduled. The heater assembly shall be designed and rated for installation on the fan coil unit without the use of duct extensions or transitions, and be located in the unit as to not expose the fan assembly to excessive leaving air temperatures that could affect motor performance.

The heater and unit assembly shall be listed for zero clearance and meet all NEC requirements, and be cETLus listed with the unit as an assembly in compliance with UL/ANSI Standard 1995.

Heating elements shall be open coil type nichrome wire mounted in ceramic insulators and located in an insulated galvanized steel housing. Elements shall terminate in a machine staked stainless steel terminal secured with stainless steel hardware for corrosion resistance. The element support brackets shall be spaced no greater than 3-1/2" on center. Internal wiring shall be rated for 105°C minimum. Heaters shall include overtemperature protection consisting of an automatic reset primary thermal limit and back up secondary thermal limit. Heaters shall be single stage.

Option: Provide a manual reset secondary thermal limit.

Units with electric heat shall have an incoming line power distribution block shall be designated to accept single point power wiring capable of carrying 125% of the calculated load current.

Option: Devices used to energize and de-energize (switch) electric heat must be silent. Magnetic, mercury, and/or quiet relays and/or contactors are not acceptable.

PIPING PACKAGES

Provide a standard factory assembled valve piping package to consist of a 2 or 3 way, on/off, motorized electric control valve and two ball isolation valves. Control valves are piped normally closed to cold water coils and normally open to hot water coils. Maximum entering water temperature on the control valve is 200 °F.

Provide high pressure close-off actuators for 2-way or 3-way on/off control valves. Maximum close-off pressure is 125 PSIG.

Option: Valve package mounted from the factory with structural supports. Field mounted valves are not acceptable.

Option: Provide 3-wire floating point modulating control valve (fail-in-place) in lieu of standard 2-position control valve with factory assembled valve piping package.

Option: Provide 0-10V proportional control valve (fail-in-place) in lieu of standard 2-position control valve with factory assembled valve piping package.

Option: Provide a fixed flow control device with a removable cartridge or each piping package.

Option: Normally open in lieu of Normally Closed on/off valves.

Option: Spring return (N.O. or N.C.) modulating control valve.

Option: Spring return (N.O. or N.C.) proportional control valve.

Option: Provide pressure-temperature ports for each piping package.

Piping package shall be completely factory assembled, including interconnecting pipe, and shipped separate from the unit for field installation on the coil, so as to minimize the risk of freight damage.
