Redefine your comfort zone.™

## Overview

Either serving small areas or multiple zones Titus Air Handling Units supply the exact amount of treated, conditioned air to the occupied spaces of a building. These compact belt drive units are designed for efficient operation and provide economical heating and cooling. These units are the work horse of any system controlling building temperature, humidity, and indoor air quality.

Four different models available in numerous configurations, delivers a unit tailored to meet the needs of any project. Horizontal ceiling mounted units typically are used in applications that exceed the requirements of direct drive fan coils products. Rooftop units are installed externally introducing fresh air into the system. Vertical units are generally installed in maintenance closets or mechanical rooms near the zones they serve so maintenance or service can be performed without intruding on the

## air handlers

occupants. The modular unit is extremely flexible and can be adapted to meet most supply and return configurations.

Titus Air Handlers can operate with 100 percent outside air, 100 percent recirculated air, or anywhere in between. All models are designed to allow easy access to all components for maintenance and service. Fan motors are installed on a variable pitch mounting plate allowing for fine tune balancing of the system in the field.

## Horizontal Air Handler Belt Drive Series

air handlers

### HAB

- ETL-listed. Constructed in compliance with ANSI/UL 1995 Standard
- High efficiency coil – 4-row seamless  $\frac{3}{8}$ " OD (HAB 08 & 12),  $\frac{1}{2}$ " OD (HAB 16 & 20), and  $\frac{5}{8}$ " OD (HAB 30 thru 80) copper tubes with 10 aluminum fins per inch for 2-pipe applications
- Pipe entry is right hand as you are looking at the filter (in the direction of the airflow)
- Manual air vent
- Permanently lubricated ball bearing blowers. Blower wheels are belt-drive, double-inlet, forward-curved, and factory balanced
- Condensate pan fabricated of heavy gauge 304 stainless steel with three-dimensional slope for positive drainage
- Cabinet fabricated of heavy gauge galvanized steel, specially coated on the outside with powder-coated enamel paint and lined with 1", dual density, 1.5-pound fiberglass insulation with antimicrobial coating

HAB

- Suspension -  $\frac{7}{8}$ " knockouts for use with  $\frac{3}{8}$ " threaded suspension rod are provided at the top and bottom of all unit corners for hanging the unit
- Filters - 2" fiberglass disposable with a horizontal filter slide

### AVAILABLE MODELS:

HAB08 / 800 cfm  
HAB12 / 1200 cfm  
HAB16 / 1600 cfm  
HAB20 / 2000 cfm  
HAB30 / 3000 cfm  
HAB40 / 4000 cfm  
HAB60 / 6000 cfm  
HAB80 / 8000 cfm

### OVERVIEW

Each horizontal blower coil unit provides flexibility of design due to belt-driven fans, multi-row coil capability, and available factory options. These products are designed for the common areas and large meeting rooms in hotels, motels, apartment complexes, condominiums, schools, universities, hospitals, and nursing homes.

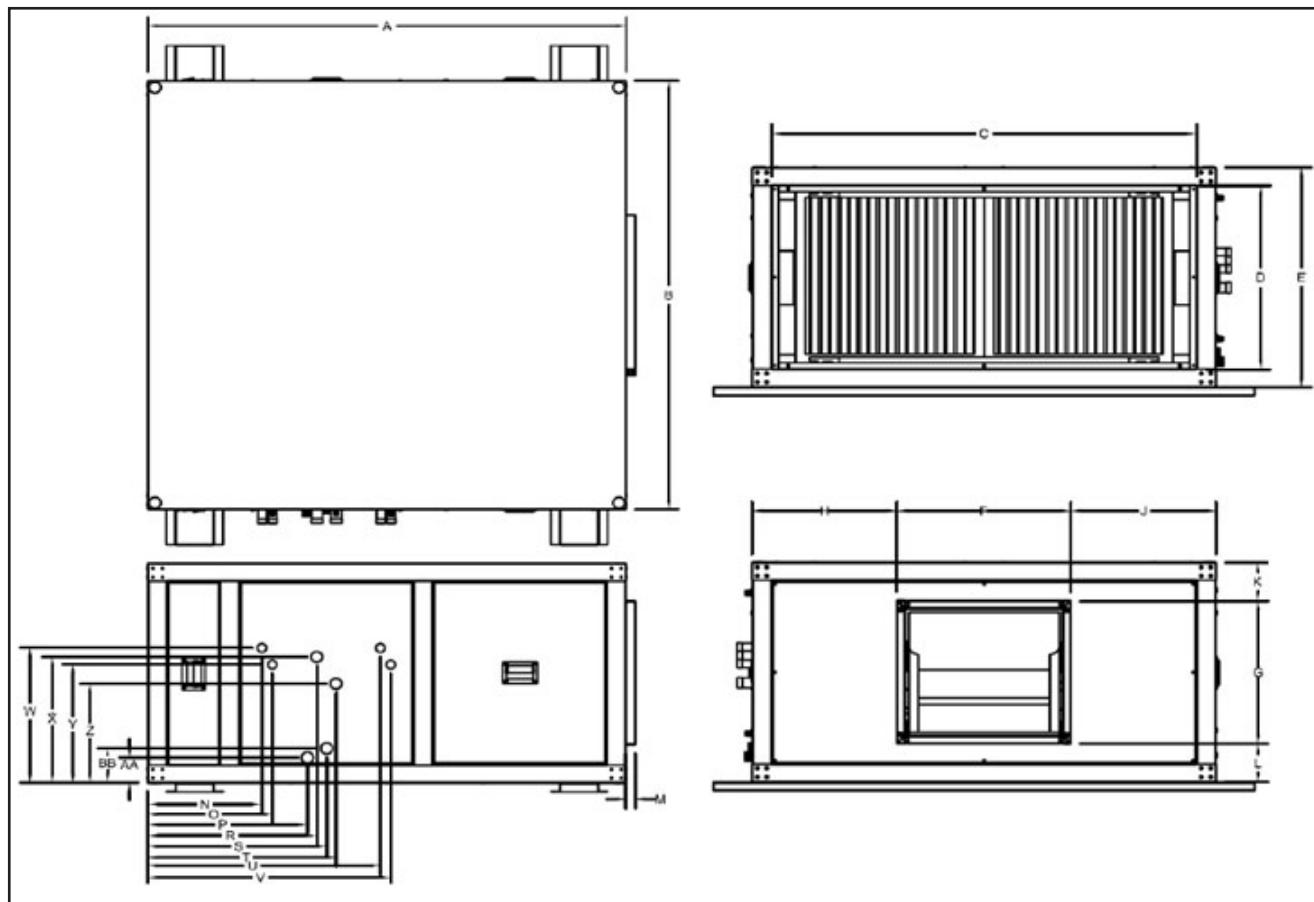

### OPTIONAL FEATURES INCLUDE

- High efficiency coil – 6-row seamless  $\frac{3}{8}$ " OD (HAB 08 & 12),  $\frac{1}{2}$ " OD (HAB 16 & 20), and  $\frac{5}{8}$ " OD (HAB 30 thru 80) copper tubes with 10 aluminum fins per inch for 2-pipe applications
- High efficiency coils – Chilled water 4- or 6-row seamless  $\frac{3}{8}$ " OD (HAB 08 & 12),  $\frac{1}{2}$ " OD (HAB 16 & 20), and  $\frac{5}{8}$ " OD (HAB 30 thru 80) copper tubes with 10 aluminum fins per inch. Hot water 1- (HAB 08, 12, 16, & 20 only) or 2-row seamless  $\frac{3}{8}$ " OD (HAB 08 & 12),  $\frac{1}{2}$ " OD (HAB 16 & 20), and  $\frac{5}{8}$ " OD (HAB 30 thru 80) copper tubes with 10 aluminum fins per inch.
- Left hand pipe entry as you are looking at the filter (in the direction of the airflow)
- Motors - Standard ETL-listed motors consist of Totally Enclosed, Fan Cooled (TEFC) and Open, Drip-Proof (ODP) casing, shaded-pole 115/60/1 in  $\frac{1}{4}$  HP through 2 HP; TEFC and ODP 115/208-230/1 (wired for 115V) in  $\frac{1}{4}$  to 2 HP; TEFC and ODP 208-230/460/60/3 in  $\frac{1}{4}$  HP to 10 HP; TEFC and ODP 575/60/3 in  $\frac{1}{4}$  HP to 10 HP; other voltages, configurations, and horsepower options available, but not ETL-listed. All motor sheaves are variable-pitch and single-groove. Blower pulleys are split-tapered bushing.
- Mixing boxes
- Controls for mixing boxes - Field install and wire, three-position and fully modulating packages  
*Note: Controls such as contactors, starters, and/or transformers/fan relays are supplied by others*
- Discharge plenum with adjustable double-deflection grille (cannot be used with electric heat)
- Return air grille
- Unit spring vibration isolators
- Pleated filter, 2"
- Cabinet liner in closed cell insulation
- Electric heat - Models HAB08, 12, 16, 20, 30 and 40
- Double wall construction
- Face and bypass damper
- Face and bypass damper filter section

#### Notes:

1. Motor HP = 1.15\* x BHP

\* In the absence of a specified drive loss factor, use 1.15. To select motor size, find the Brake Horsepower (BHP) for the design cfm and External Static Pressure (ESP). Multiply BHP by 1.15 (or specified factor) and round up to next size motor. Example: 1600 cfm at 0.75" ESP requires 0.70 BHP.  $1.15 \times 0.70 = 0.805$ . Round up to nearest nominal motor size = 1 HP.

2. Total Static Pressure (TSP) = Internal Static Pressure + External Static Pressure (ESP)

3. ESP = TSP – Internal SP

## Vertical Air Handler Belt Drive Series

air handlers

### VAB

- ETL-listed. Constructed in compliance with ANSI/UL 1995 Standard
- High efficiency coil – 4-row seamless  $\frac{3}{8}$ " OD (VAB 08 & 12),  $\frac{1}{2}$ " OD (VAB 16 & 20), and  $\frac{5}{8}$ " OD (VAB 30 & 40) copper tubes with 10 aluminum fins per inch for 2-pipe applications
- Pipe entry is left hand as you are looking at the front of the unit
- Manual air vent
- Permanently lubricated ball bearing blowers. Blower wheels are belt-drive, double-inlet, forward-curved and factory balanced
- Condensate pan fabricated from 304 stainless steel
- Cabinet fabricated of heavy gauge galvanized steel, specially coated on the outside with powder-coated enamel paint and lined with  $\frac{3}{4}$ ", dual density, 1.5-pound fiberglass insulation
- Large, easy to remove access panels are located on the front of each unit
- Filters are 2" fiberglass disposable with front access

VAB

condos

universities

hospitals

hotels / motels

### AVAILABLE MODELS:

VAB08 / 800 cfm

VAB12 / 1200 cfm

VAB16 / 1600 cfm

VAB20 / 2000 cfm

VAB30 / 3000 cfm

VAB40 / 4000 cfm

See website for Specifications

- Pleated filter, 2"
- Cabinet liner in closed cell insulation
- Electric heat

### OVERVIEW

Titus vertical blower coil units provide flexibility of design due to belt-driven fans, multi-row coil capacity, and available factory options. These products are designed for the common areas and large meeting rooms in hotels, motels, apartment complexes, condominiums, schools, universities, hospitals, and nursing homes.

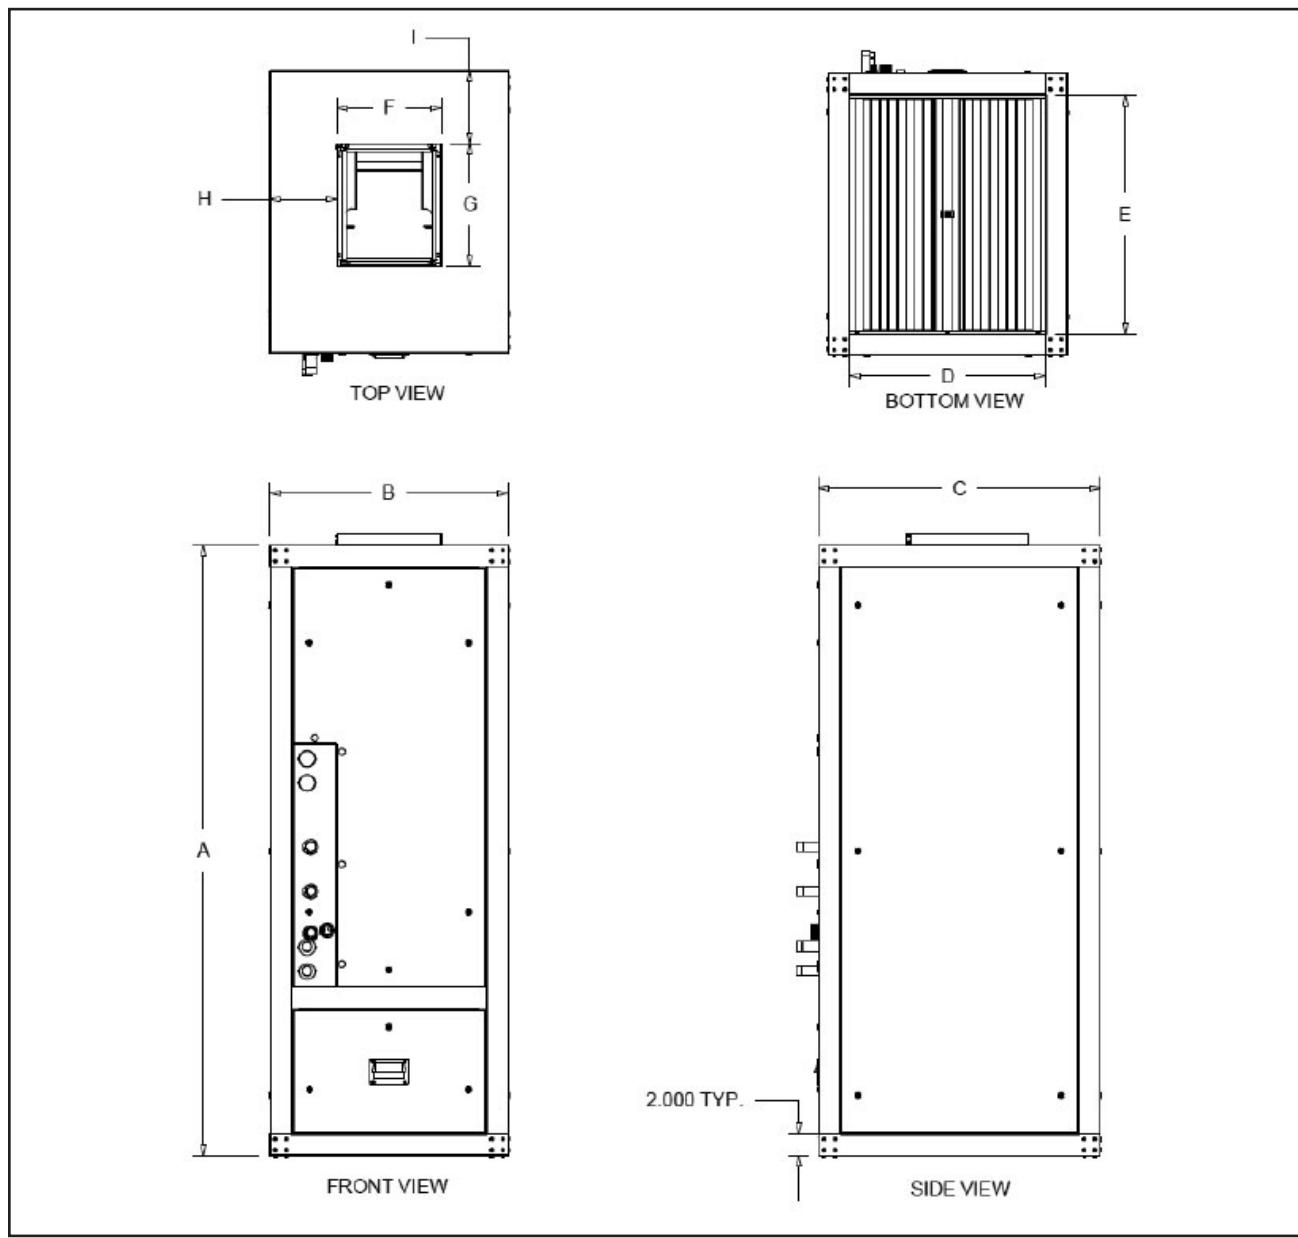

### OPTIONAL FEATURES INCLUDE

- High efficiency coils – Hot water 1- (VAB 08, 12, 16, & 20 only) or 2-row seamless  $\frac{3}{8}$ " OD (VAB 08 & 12),  $\frac{1}{2}$ " OD (VAB 16 & 20), and  $\frac{5}{8}$ " OD (VAB 30 & 40) copper tubes with 10 aluminum fins per inch installed in re-heat or pre-heat configurations
- Motors - Standard ETL-listed motors consist of Totally Enclosed, Fan Cooled (TEFC) and Open, Drip-Proof (ODP) casing, shaded-pole 115/60/1 in  $\frac{1}{4}$  HP through 2 HP; TEFC and ODP 115/208-230/1 (wired for 115V) in  $\frac{1}{4}$  to 2 HP; TEFC and ODP 208-230/460/60/3 in  $\frac{1}{4}$  HP to 5 HP; TEFC and ODP 575/60/3 in  $\frac{1}{4}$  HP to 5 HP; other voltages, configurations, and horsepower options available, but not ETL-listed. All motor sheaves are variable-pitch and single-groove. Blower pulleys are split-tapered bushing.
- Discharge or return plenum with front or rear opening (grilles field supplied and installed)

Notes:

1. Motor HP = 1.15\* x BHP

\* In the absence of a specified drive loss factor, use 1.15. To select motor size, find the Brake Horsepower (BHP) for the design cfm and External Static Pressure (ESP). Multiply BHP by 1.15 (or specified factor) and round up to next size motor. Example: 1600 cfm at 0.75" ESP requires 0.46 BHP.  $1.15 \times 0.46 = 0.529$ . Round up to nearest nominal motor size =  $\frac{3}{4}$  HP.

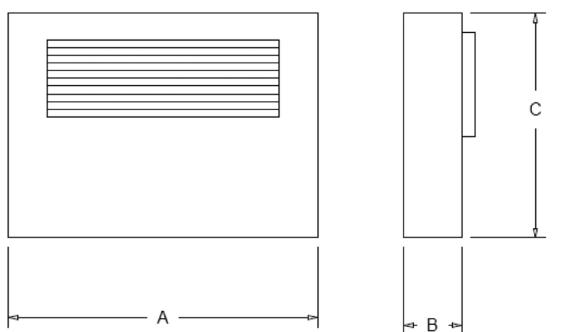

2. Total Static Pressure (TSP) = Internal Static Pressure + External Static Pressure (ESP)

3. ESP = TSP – Internal SP

## Modular Air Handler Belt Drive Series

air handlers

### MAB

- ETL-listed. Constructed in compliance with ANSI/UL 1995 Standard
- High efficiency coil – 4-row seamless  $\frac{3}{8}$ " OD (MAB 08 & 12),  $\frac{1}{2}$ " OD (MAB 16 & 20), and  $\frac{5}{8}$ " OD (MAB30 thru 80) copper tubes with 10 aluminum fins per inch for 2-pipe applications
- Pipe entry is right hand on the side of the cabinet as you are looking at the filter (in the direction of the airflow)
- Manual air vent
- Permanently lubricated ball bearing blowers. Blower wheels are belt-drive, double-inlet, forward-curved, and factory balanced
- Condensate pan fabricated of heavy gauge 304 stainless steel with three-dimensional slope for positive drainage
- Cabinet fabricated of heavy gauge galvanealed steel, specially coated on the outside with powder-coated enamel paint and lined with  $\frac{3}{4}$ ", dual density, 1.5-pound fiberglass insulation with antimicrobial coating on models MAB08 and 12. Models MAB08 and 12 are of one-piece construction, vertical fan discharge only. Models MAB16, 20, 30, 40, 60 and 80 are of two-piece construction with each piece individually packaged for shipment; optional fan discharge arrangements are achieved by field repositioning of the access panels.
- Filters are 2" disposable with access on both sides of the cabinet

MAB

k-12 education      universities      hospitals      hotels / motels

See website for Specifications

### AVAILABLE MODELS:

MAB08 / 800 cfm  
MAB12 / 1200 cfm  
MAB16 / 1600 cfm  
MAB20 / 2000 cfm  
MAB30 / 3000 cfm  
MAB40 / 4000 cfm  
MAB60 / 6000 cfm  
MAB80 / 8000 cfm

### OVERVIEW

Titus modular blower coil units provide flexibility of design due to belt driven fans, multi-row coil capability, and available factory options. These products are designed for the common areas and large meeting rooms in hotels, motels, apartment complexes, condominiums, schools, universities, hospitals, and nursing homes.

### OPTIONAL FEATURES INCLUDE

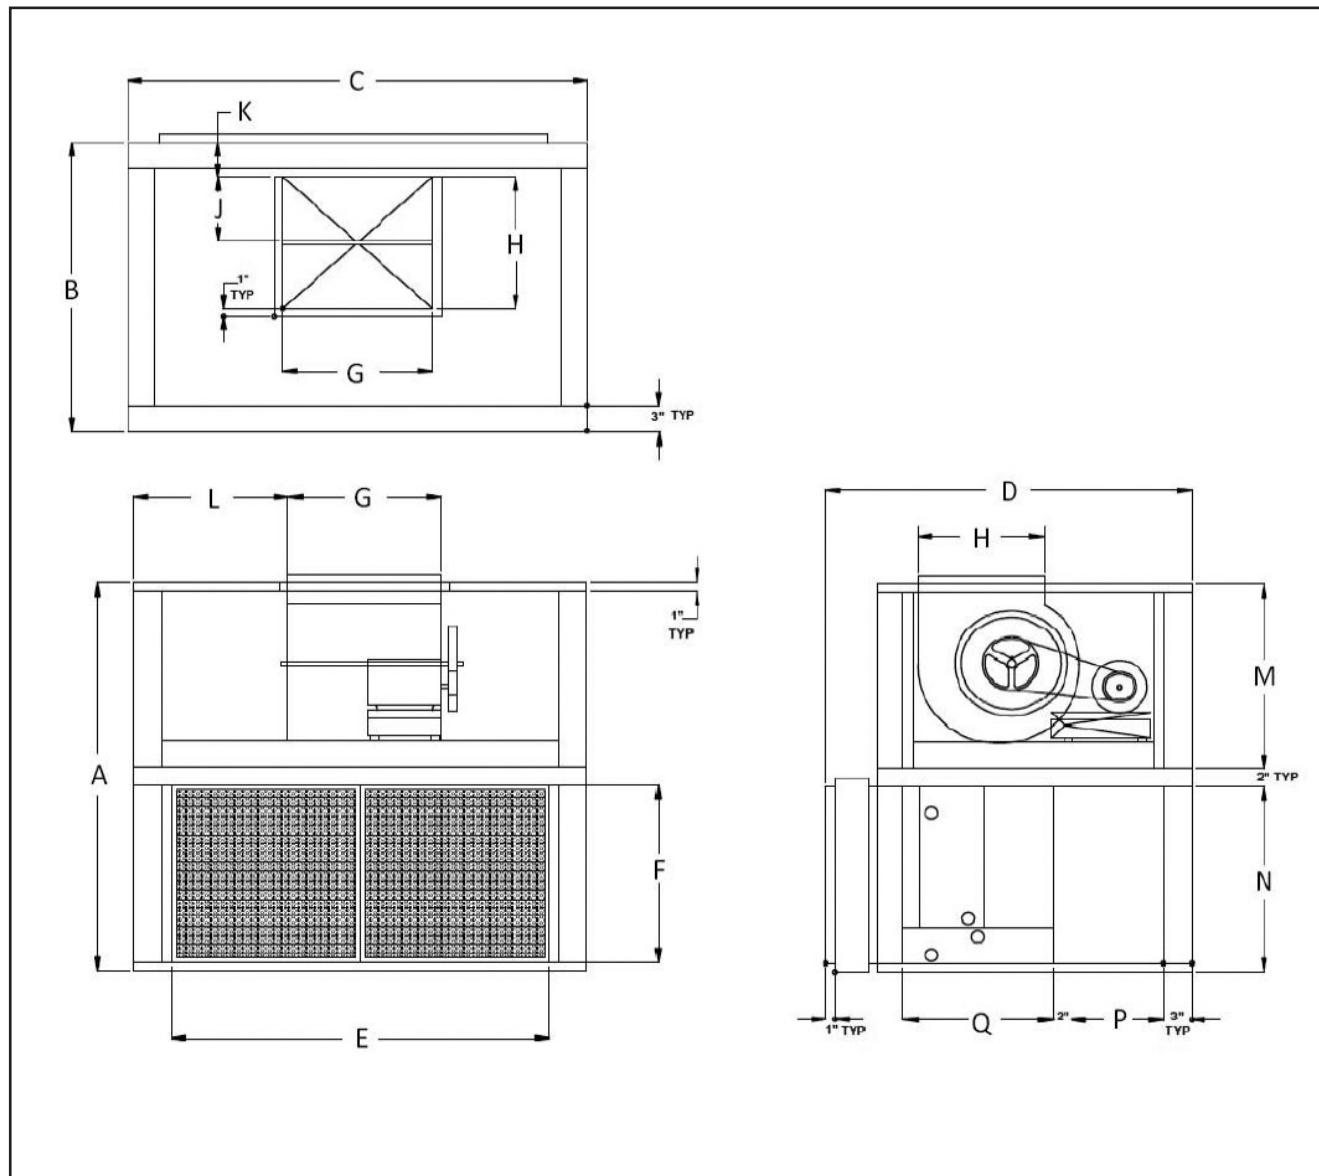

- High efficiency coil – 6-row seamless  $\frac{3}{8}$ " OD (MAB08 & 12),  $\frac{1}{2}$ " OD (MAB16 & 20), and  $\frac{5}{8}$ " OD (MAB30 thru 80) copper tubes with 10 aluminum fins per inch for 2-pipe applications  
High efficiency coils – Chilled water 4- or 6-row seamless  $\frac{3}{8}$ " OD (MAB08 & 12),  $\frac{1}{2}$ " OD (MAB16 & 20), and  $\frac{5}{8}$ " OD (MAB30 thru 80) copper tubes with 10 aluminum fins per inch. Hot water 1- (MAB08, 12, 16, & 20 only) or 2-row seamless  $\frac{3}{8}$ " OD (MAB08 & 12),  $\frac{1}{2}$ " OD (MAB16 & 20), and  $\frac{5}{8}$ " OD (MAB30 thru 80) copper tubes with 10 aluminum fins per inch.
- Left hand pipe entry as you are looking at the filter (in the direction of the airflow)

- Motors - Standard ETL-listed motors consist of Totally Enclosed, Fan Cooled (TEFC) and Open, Drip-Proof (ODP) casing, shaded-pole 115/60/1 in  $\frac{1}{4}$  HP through 2 HP; TEFC and ODP 115/208-230/1 (wired for 115V) in 1/4 to 2 HP; TEFC and ODP 208-230/460/60/3 in  $\frac{1}{4}$  HP to 10 HP; TEFC and ODP 575/60/3 in  $\frac{1}{4}$  HP to 10 HP; other voltages, configurations, and horsepower options available, but not ETL-listed. All motor sheaves are variable-pitch and single-groove. Blower pulleys are split-tapered bushing.
- Mixing boxes, field install
- Controls for mixing boxes, field install and wire, 3-position and fully modulating packages  
Note: Controls such as contactors, starters, and/or transformers/fan relays are supplied by others
- Discharge plenum with adjustable double-deflection grille, (cannot be used with electric heat)
- Return air grille models
- Pleated filter, 2"
- Six" leg kit
- Cabinet liner in one" closed cell or one" IAQ fiberglass (models MAB16, 20, 30, 40, 60 and 80) insulation. Electric heat (models MAB16, 20, 30 and 40).
- Downflow or horizontal arrangement

## Notes:

- Motor HP = 1.15\* x BHP  
\* In the absence of a specified drive loss factor, use 1.15. To select motor size, find the Brake Horsepower (BHP) for the design cfm and External Static Pressure (ESP). Multiply BHP by 1.15 (or specified factor) and round up to next size motor. Example: 1600 cfm at 0.75" ESP requires 0.46 BHP.  $1.15 \times 0.46 = 0.529$ . Round up to nearest nominal motor size =  $\frac{3}{4}$  HP.
- Total Static Pressure (TSP) = Internal Static Pressure + External Static Pressure (ESP)
- ESP = TSP – Internal SP

#### Notes:

1. Motor HP = 1.15\* x BHP  
 \* In the absence of a specified drive loss factor, use 1.15. To select motor size, find the Brake Horsepower (BHP) for the design cfm and External Static Pressure (ESP). Multiply BHP by 1.15 (or specified factor) and round up to next size motor. Example: 1600 cfm at 0.75" ESP requires 0.46 BHP.  $1.15 \times 0.46 = 0.529$ . Round up to nearest nominal motor size =  $\frac{3}{4}$  HP.
2. Total Static Pressure (TSP) = Internal Static Pressure + External Static Pressure (ESP)
3. ESP = TSP – Internal SP

## Rooftop Air Handler Belt Drive Series

air handlers

### RAB

- ETL-listed. Constructed in compliance with ANSI/UL 1995 Standard
- High efficiency coil – 4-row seamless  $\frac{3}{8}$ " OD (RAB 08 & 12),  $\frac{1}{2}$ " OD (RAB 16 & 20), and  $\frac{5}{8}$ " OD (RAB 30 thru 80) copper tubes with 10 aluminum fins per inch for 2-pipe applications
- Pipe entry is right hand looking at the filter in the direction of the airflow and can be field piped directly to the outside or down through the piping chase provided inside the unit for areas with severe winter conditions
- Manual air vent
- Blowers oriented in down discharge configuration and mounted on isolators. Blower wheels are belt-drive, double-inlet, forward curved, and factory balanced.
- Condensate pan fabricated of heavy gauge 304 stainless steel with three-dimensional slope for positive drainage
- Cabinet fabricated of heavy gauge galvanealed steel with baked-on powder-coated enamel coating providing maximum corrosion protection. Cabinet completely insulated with 1", 1.5-pound fiberglass insulation. Top panel has two" insulation between double wall construction.

RAB

- Filters are 2" fiberglass disposable

k-12 education      universities      hospitals      hotels / motels

See website for Specifications

### AVAILABLE MODELS:

RAB08 / 800 cfm  
 RAB12 / 1200 cfm  
 RAB16 / 1600 cfm  
 RAB20 / 2000 cfm  
 RAB30 / 3000 cfm  
 RAB40 / 4000 cfm  
 RAB60 / 6000 cfm  
 RAB80 / 8000 cfm

### OVERVIEW

Titus rooftop blower coil units provides flexibility of design due to belt-driven fans, multi-row coil capability, and available factory options. These products are designed for the common areas and large meeting rooms in hotels, motels, apartment complexes, condominiums, schools, universities, hospitals, and nursing homes.

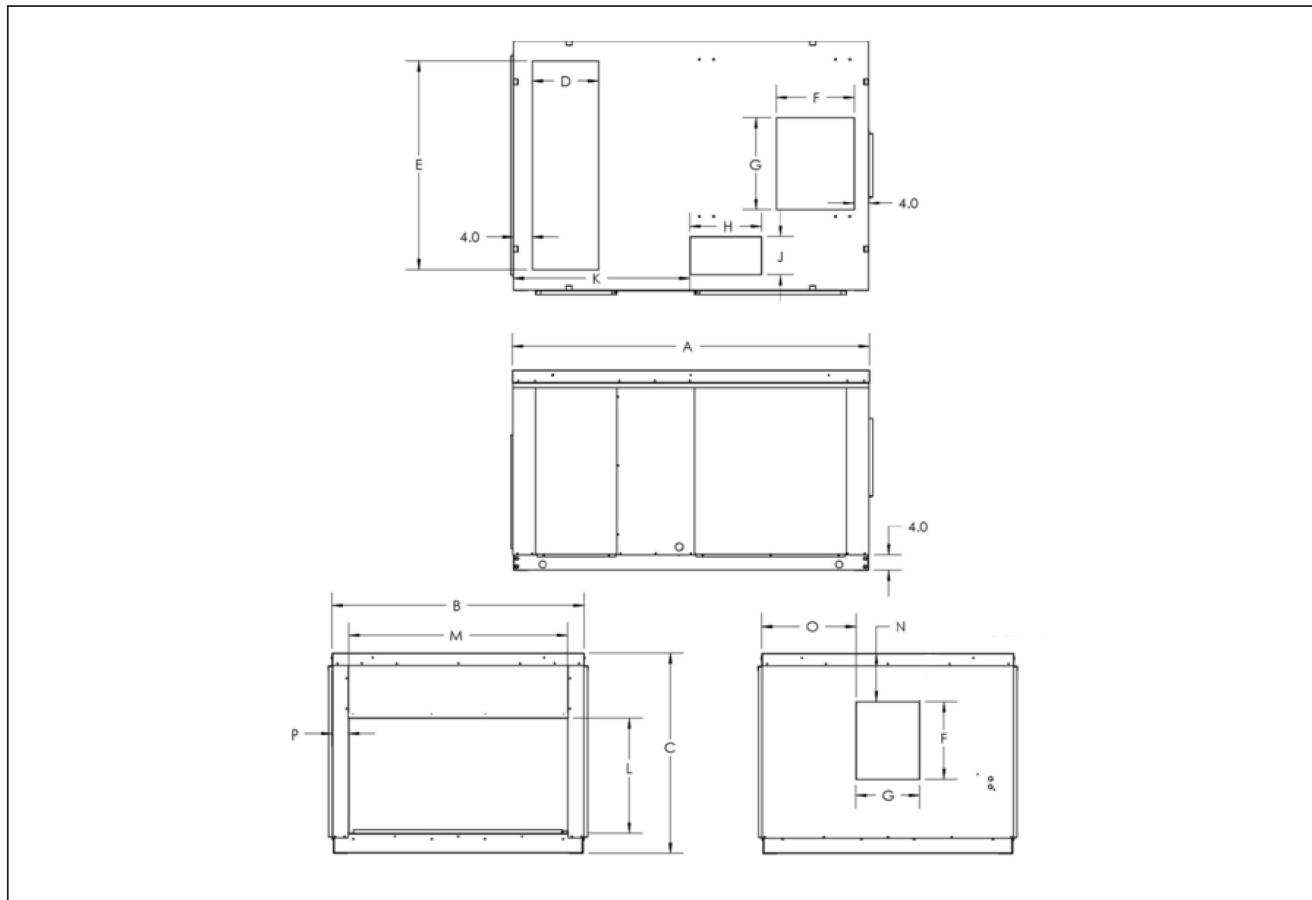

### OPTIONAL FEATURES INCLUDE

- High efficiency coil – 6-row seamless  $\frac{3}{8}$ " OD (RAB08 & 12),  $\frac{1}{2}$ " OD (RAB16 & 20), and  $\frac{5}{8}$ " OD (RAB30 thru 80) copper tubes with 10 aluminum fins per inch for 2-pipe applications
- High efficiency coils – Chilled water 4- or 6-row seamless  $\frac{3}{8}$ " OD (RAB08 & 12),  $\frac{1}{2}$ " OD (RAB16 & 20), and  $\frac{5}{8}$ " OD (RAB30 thru 80) copper tubes with 10 aluminum fins per inch. Hot water 1- (RAB08, 12, 16, & 20 only) or 2-row seamless  $\frac{3}{8}$ " OD (RAB08 & 12),  $\frac{1}{2}$ " OD (RAB16 & 20), and  $\frac{5}{8}$ " OD (RAB30 thru 80) copper tubes with 10 aluminum fins per inch.
- Pleated filter, 2"
- Double-wall construction
- Cabinet liner in  $\frac{7}{8}$ " closed cell or 1" IAQ fiberglass insulation
- 14" high roof curb

#### Notes:

1. Motor HP = 1.15\* x BHP  
 \* In the absence of a specified drive loss factor, use 1.15. To select motor size, find the Brake Horsepower (BHP) for the design cfm and External Static Pressure (ESP). Multiply BHP by 1.15 (or specified factor) and round up to next size motor. Example: 1600 cfm at 0.75" ESP requires 0.75 BHP.  $1.15 \times 0.75 = 0.86$ . Round up to nearest nominal motor size = 1 HP.
2. Total Static Pressure (TSP) = Internal Static Pressure + External Static Pressure (ESP)
3. ESP = TSP – Internal SP

#### Notes:

1. ETL-listed.
2. Models (H)(V)(M)(R)AB08, 12, 16 and 20 - two-speed motors installed only (must be field wired)
3. Models (H)(V)(M)(R)AB08, 12, 16 and 20 - single- and three-phase motors installed and wired to unit junction box
4. Motor sizes 1/4 to 1.5 hp single-phase include auto reset overload. All others require field supplied overload protection.
5. A triangle (▲) indicates availability on most models. 208-230/460 3-phase ODP, high efficiency 5hp and 7.5hp no available on VAB. 230 3-phase ODP, high efficiency 5hp not available on VAB. 208-230/460 3-phase ODP, high efficiency 10 hp is available on RAB.
6. Second speed at 2/3 rpm (1140rpm)

#### FULL-LOAD CURRENTS IN AMPERES, SINGLE-PHASE ALTERNATING-CURRENT MOTORS

The values of full-load currents are for motors running at usual speeds and motors with normal torque characteristics. Motors built for especially low speeds or high torques may have higher full-load currents, and multi-speed motors will have full-load current varying with speed, in which case, the nameplate current rating shall be used. The voltages listed in the table are rated motor voltages. The currents listed shall be permitted for system voltage ranges of 110 to 120 and 220 to 240 volts. Values presented are from the NEC Handbook, 1999 Edition. Actual motor nameplate amps may vary.

Single-Phase Motors			
Horsepower	Voltage		
	115	208	230
1/4	5.8	3.2	2.9
1/3	7.2	4.0	3.6
1/2	9.8	5.4	4.9
3/4	13.8	7.6	6.9
1	16	8.8	8
1 1/2	20	11	10
2	24	13.2	12

#### FULL-LOAD CURRENTS IN AMPERES, THREE-PHASE ALTERNATING-CURRENT MOTORS

The values of full-load current are typical for motors running a speed usual for belted motors and motors with normal torque characteristics. Motors built for low speeds (1200 RPM or less) or high torques may require more running current, and multi-speed motors will have full-load current varying with speed. In these cases, the nameplate current rating shall be used. The voltages listed are rated motor voltages. The currents listed shall be permitted for system voltages ranges of 110 to 120, 220 to 240, and 400 to 480. Values presented are from the NEC Handbook, 1999 Edition. Actual motor nameplate amps may vary.

Three-Phase Motors (FLA)				
Horsepower	Voltage			
	208	230	460	575
1/2	2.2	2.0	1.0	.08
3/4	3.1	2.8	1.4	1.1
1	4.0	3.6	1.8	1.4
1 1/2	5.7	5.2	2.7	2.1
2	7.5	6.8	3.4	2.7
3	10.7	9.6	4.8	3.9
5	16.7	15.2	7.6	6.1
7 1/2	24	22	11	9
10	31	28	14	11
