NOTES:

- Some drawings are not shown in this catalog.
- All data herein is subject to change without notice.
- Drawings not for installation purposes.
- ETL Report Number 103667581CRT-003.
- UL60335-2-40 / CSA C22.2 No. 60335-2-40.
- The production facility in Largo, FL has been found to conform to the Quality Management System standard: ISO 9001:2015. Certificate no.: 252468-2017-AQ-USA-ANAB.

FEATURES AND BENEFITS

HIGH PERFORMANCE

The Titus THH Series horizontal high performance fan coil units are designed to maximize flexibility of selection and installation.

The units are also designed to exceed the stringent quality standards of the institutional market, while remaining cost competitive in the light commercial segment of the market.

Titus horizontal fan coil units set the new standards for quality, flexibility, and competitive pricing.

DESIGN FLEXIBILITY

The extensive variety of standard options available on the THH Series units are where you find the versatility to fit any HVAC system designer's needs.

Options include: mixing box with linkage, rear or bottom ducted return, foil faced or elastomeric closed cell foam insulation, solid or telescoping bottom panels for unit recessing, single wall stainless steel drain pans, and electric heat with single power connection. All electric heat units are listed with ETL as an assembly and carry the cETL label.

All units comply with the latest edition of AHRI Standard 440 for testing and rating fan coil units, are certified, and display the AHRI symbol. Sizes 14 through 20 exceed the maximum airflow rate in AHRI 440.

High efficiency motors, fan relays, disconnects and fusing mean easier coordination between mechanical and electrical trades.

Coil options allow for three, four or six row chilled water coils. One to four row hot water or one and two row standard steam coils may be placed in the preheat or reheat position.

CONVENIENT INSTALLATION

All THH Series fan coil units are shipped completely assembled, reducing field installation time and labor. All units are thoroughly inspected and tested prior to shipment, eliminating potential problems at startup. Motor wiring is brought to a junction box on the outside of the unit casing, reducing electrical hook-up time.

Plenum units are field convertible for either rear or bottom return without the need for special adapters and tools.

All THH Series fan coil units have a bottom and side access electrical enclosure, allowing easy access to all electrical components, terminal blocks and wiring.

Available factory installed control packages can greatly reduce field labor and setup time. Consisting of control transformer and all needed relays, these packages integrate seamlessly with either factory provided thermostats or field installed thermostats and controllers.

Factory furnished valve packages assure proper fit, operation and performance. Valve packages are completely assembled and shipped loose with the units.

QUALITY PRODUCT

THH Series fan coil units are built from galvanized steel. Exposed Model THHE cabinetry is powder coated galvannealed steel.

Standard insulation is 1/2 inch thick fiberglass, complying with UL 181 and NFPA 90A. Optional foil faced or elastomeric closed cell foam insulation may be specified.

All units, with or without electric heat, are cETL listed and labeled. All wiring is in compliance with NEC, assuring safety and quality for the owner.

THH Series fan coil units have a removable fan assembly. The entire fan assembly can be removed from the unit and serviced easily on a workbench.

CONSTRUCTION FEATURES

MODEL THHP

THH Series fan coils have many standard and optional features which are unique to the industry (see page 6 for a complete listing).

1/2" thick fiberglass insulation (standard) or foil faced or elastomeric closed cell foam insulation (optional)

Galvanized steel casing

1" minimum duct collar allows quick field connection of duct work

Integral filter rack with 1" filter and integral rear ducted (shown) or bottom return on all plenum units. Optional 2" filter available.

ETL and AHRI 440 listed and labeled

Coils are AHRI 410 listed and labeled

Chilled water coils up to 6 rows

Hot water heating coils up to 4 rows, or steam coils up to 2 rows can be mounted in the preheat or reheat position. Maximum of 8 rows total.

Permanently lubricated, three tap, PSC fan motors designed for quiet and efficient operation

Single point power connection on all units with electric heat

Removable fan assembly for bottom or rear access and servicing Optional electric resistance heat is ETL listed as an assembly for safety compliance

Enclosure allows easy side access to all electrical components Single wall galvanized or stainless steel (optional) drain pans are sloped to drain connections

Drain pans can be easily removed for cleaning. Available with optional auxiliary drip pan (shown above)

MODEL THHE

Horizontal Exposed Cabinet

MODEL THHC

Horizontal Free Return

CONSTRUCTION FEATURES

MODELS THHC/THHP/THHE

ELECTRICAL ENCLOSURE

The bottom access electrical enclosure with removable side access panel provides access to all electric heat and control components. Terminal strips are furnished for simple power and control wiring connections. Multiple knockouts allow wiring entries from either side of the compartment.

DRAIN PAN

Standard drain pans are externally insulated, single wall galvanized steel with an option for stainless steel. Drain pans are available with secondary drain connection. On concealed models, the THH Series drain pan is easily removable for cleaning.

MIXING BOX

The optional fully insulated mixing box section comes completely assembled to the THHP unit, featuring low leakage, heavy gauge steel dampers with integral linkage. Damper positioning is field configurable and bottom filter access is standard. An optional factory provided and installed damper actuator is also available.

COILS

All fan coils are available in 2 or 4 pipe configurations. The heating coil may be placed in the reheat or preheat position.

FILTERS

One inch throwaway filters are tight fitting to prevent air bypass. Filters are easily removable from the bottom without the need for tools. The filter rack is convertible from rear to bottom return without the need for additional parts. Optional 1" and 2" pleated filters are available for use with the THHP unit.

POWDER COATED PAINTED SURFACE

Exposed cabinet Model THHE features powder coat finish that resists scuffing, scratching, fading, and fingerprints.

FEATURES AND OPTIONS

STANDARD FEATURES

Construction

All Units

- · AHRI 440 certified and labeled
- · Galvanized steel construction
- 1/2" thick fiberglass insulation
- 1 1/2" duct discharge collar
- Holes are provided at four points for hanging units Plenum units
- · Integral filter rack with 1" throwaway filter
- Integral rear ducted return field reversible to bottom return

Exposed units

- · Single deflection rear return grille
- · Double deflection discharge grille
- · Durable powder coat paint
- · 18 gauge cabinet construction

Coils

- · AHRI 410 certified and labeled
- · Cooling 3, 4 or 6 row chilled water
- Heating 1, 2, 3 or 4 row hot water or 1 or 2 row steam
 reheat or preheat position
- · 8 total rows of cooling and heating coils maximum
- 3/8" O.D. seamless copper tubes
- 0.012" tube wall thickness
- High efficiency aluminum fin surface for optimizing heat transfer, pressure drop and carryover
- · Left or right hand connections
- · Removable for service
- · Manual air vent

Drain Pans

- Single wall, galvanized steel, externally insulated fire retardant and antimicrobial closed cell foam
- · Sloped to drain connection
- · Tool-free removable
- 7/8" O.D. primary drain connection

Fan Assemblies

- · Forward curved, DWDI centrifugal type
- · 115 volt, single phase, three tap PSC motors
- · Quick disconnect motor connections
- Removable fan(s)/motor(s) for service

Electrical

- · cETL listed for safety compliance
- · Electrical junction box for field wiring terminations
- · Terminal block for field connections

Electric Heat

- · cETL listed as an assembly for safety compliance
- Integral electric heat assembly with removable electric heat rack for easy service
- Automatic reset primary and back-up secondary thermal limits
- Single point power connection
- Electrical enclosure with hinged bottom acess door and removable side access panel

OPTIONAL FEATURES

Construction

All units

- · Foil faced fiberglass insulation
- · Elastomeric closed cell foam insulation

Plenum units

- · Bottom return
- Mixing box with top/rear or rear/bottom dampers field reversible
- · Damper actuator
- Spare 1" throwaway filters
- 1" and 2" pleated filters, MERV8 or MERV13

Exposed units

- · Single deflection bottom return grille
- · Ducted supply
- · Ducted rear return

Coils

- 1/2" O.D. seamless copper tubes
- 0.016" tube wall thickness
- · 0.025" tube wall thickness
- · Automatic air vents
- · Stainless steel coil casings

Drain Pans

- · Stainless steel with external insulation
- 5/8" O.D. secondary drain connection
- Auxiliary drip pan

Fan Assemblies

- 208-230 & 277 volt, single phase, three tap PSC motors
- ECM™ motors

Electrical

- Side access electrical enclosure
- Silent solid state fan relays
- · SCR fan speed controller (only for high speed)
- Toggle disconnect switch
- Condensate overflow switch (drain pan)
- · Main fusing
- Unit and remote mounted three speed fan switches
- · Fan relay packages
- · Control power transformers

Electric Heat

- · Door interlocking disconnect switches
- · Main fusing
- · Silent relay / contactor

Piping Packages

- Factory assembled shipped loose or pre-installed
- 1/2", 3/4", and 1", 2 way and 3 way normally closed, two position electric motorized valves
- Isolation ball valves with memory stop
- · Fixed and adjustable flow control devices
- Unions and P/T ports
- · Modulating control valves

Thermostats

- Remote mounted analog, digital display or programmable
- 2 and 4 pipe control sequences
- · Automatic and manual changeover
- · Integral three speed fan switches

COILS, PHYSICAL DATA

COILS

Titus offers hot water, chilled water, and standard steam coils for specific application with all THH Series Fan Coil Units. Strict on-site inspection before, during, and after installation guarantees the highest quality and performance available.

STANDARD FEATURES

- · Cooling 3, 4 or 6 row chilled water
- Heating 1, 2, 3 or 4 row hot water, or 1 or 2 row steam
- 8 total rows of cooling and heating coils maximum
- 3/8" O.D. seamless copper tubes
- 0.012" tube wall thickness
- High efficiency aluminum fin surface for optimizing heattransfer, pressure drop and carryover
- · Left or right hand connections
- · Manual air vents

OPTIONAL FEATURES

- 1/2" O.D. seamless copper tubes
- 0.016" tube wall thickness
- 0.025" tube wall thickness
- Automatic air vents
- · Stainless steel coil casings

NOTES:

- 1. Based on 70°F DB EAT, 180°F EWT, 40°F temperature drop, high fan speed.
- 2. THHE performance data varies from THHC and THHP units. Please use software for THHE data.

NOTES

- 1. Based on 80°F DB and 67°F WB EAT, 45°F EWT, 10°F temperature rise, high fan speed. Motor type is ECM, and motor voltage is 115/1/60. Airflow under dry coil conditions. All models tested at 0.20" external static pressure.
- 2. Sizes 14 through 20 exceed the maximum airflow rate in AHRI 440.

Room Fan-Coils
AHRI Standard 440

ELECTRIC HEAT

STANDARD FEATURES

- ETL listed as an assembly for safety compliance
- · Single point power connection
- · Mounted in preheat position
- Automatic reset primary and back-up manual secondary thermal limits
- Internal wiring rated at 105°C
- Integral electric heat assembly with removable element for easy service

OPTIONAL FEATURES

- Solid state silent relay
- · Door interlocking disconnect switch
- Main fusing (for equal to or less than 48 AMPs)

USEFUL FORMULAS

 $kW^* = \underline{CFM \times \Delta T \times 1.085^{**}}$

3413

 $1\emptyset \text{ AMPs} = \underline{\text{kW x } 1000}$

Volts

* 1kW = 3413 BTU/H

** Capacity at sea level

Altitude Considerations:

Reduce by 0.034 for each 1000 ft. of altitude above sea level.

Example: 5000 ft./1000 ft. = 5

 $5 \times 0.034 = 0.17$

1.085 - 0.17 = 0.915

ELECTRICAL CALCULATIONS INFORMATION

- 1. Refer to MCA/MOP Calculator at www.titus-hvac.com for MCA and/or MOP calculations.
- 2. Non-Fused Door Interlock Disconnect Switch shall be sized according to MCA.
- 3. Fused Door Interlock Disconnect Switch and Main Fusing shall be sized according to MOP.

NOTES:

- 1. Shaded areas indicate kW and voltage options not available.
- 2. Available voltages are single phase, 60 hertz.
- 3. Standard heater kW are maximum per unit size and voltage determined based on max ESP of 0.6" in w.g for PSC or ECM motors.
- 4. Minimum 70 CFM/kW.
- 5. Lineblock has a max MCA of 90A.

NOTES:

- Shaded areas indicate kW and voltage options not available.
 Available voltages are single phase, 60 hertz.
- 3. Standard heater kW are maximum per unit size and voltage determined based on max ESP of 0.0" in w.g for PSC or ECM motors.
- 4. Minimum 70 CFM/kW.
- 5. Lineblock has a max MCA of 90A.
- 6. FNF is not offered with electric heat.

FAN PERFORMANCE CURVES, PSC

GENERAL FAN NOTES, PSC MOTORS

- 1. Fan curves depict actual performance of each motor tap without any additional fan balance adjustment. Actual capacities which fall below each curve can be obtained by adding an adjustment device. Units should not be run prior to installation of downstream ductwork; otherwise, damage to the motor may result.
- 2. Titus Fan Coil Units are equipped with permanent split-capacitor (PSC) motors with three separate taps (High, Medium and Low) which provide variable horsepower outputs. Most often, size selections are conservative and actual CFM requirements and/or external static pressure requirements are lower than those specified. In this case, the unit fan motor can be run at low or medium tap, substantially reducing the operating cost of the unit.
- 3. All fan curves are for 115/1/60 motors and include pressure losses for cabinet, electric heater, and 3 or 4 row coil. Plenum units include a clean 1" throwaway filter. For ECM and other coil configurations, adjust performance curves based on pressure losses for the coils as selected with the Titus Coil Selection Program.
- 4. See page 18 for fan motor electrical data.
- 5. For additional high static pressure applications and rating points, contact factory.

MODEL THHP REAR RETURN EXTERNAL SPACE REQUIREMENTS

Drawings not for installation purposes. Refer to unit and size-specific submittal drawings for installation.

NOTES:

- 1. All chilled water piping that projects beyond the condensate pan or the optional auxiliary drip pan must be field insulated by others.
- 2. Optional Auxiliary Drip Pan (not shown) is mounted on the outlet side of the drain pan.
- 3. Drain pan is installed with the outlet tube(s) on cooling coil connection end of coil on 4-pipe units with optional opposite end connection.
- 4. Dimensions shown on this drawing apply to standard CW and HW valve packages. Refer to the Piping Package Catalog for valve package code details. Contact factory for details on valve packages using non-standard or customer furnished components.

MODEL THHP BOTTOM RETURN EXTERNAL SPACE REQUIREMENTS

Drawings not for installation purposes. Refer to unit and size-specific submittal drawings for installation.

NOTES:

- 1. All chilled water piping that projects beyond the condensate pan or the optional auxiliary drip pan must be field insulated by others.
- 2. Optional Auxiliary Drip Pan (not shown) is mounted on the outlet side of the drain pan.
- 3. Drain pan is installed with the outlet tube(s) on cooling coil connection end of coil on 4-pipe units with optional opposite end connection.
- 4. Dimensions shown on this drawing apply to standard CW and HW valve packages. Refer to the Piping Package Catalog for valve package code details. Contact factory for details on valve packages using non-standard or customer furnished components.
- 5. Provide sufficient clearance to access electrical components and comply with all applicable codes and ordinances.

MODEL THHP WITH MIXING BOX EXTERNAL SPACE REQUIREMENTS

Drawings not for installation purposes. Refer to unit and size-specific submittal drawings for installation.

NOTES:

- 1. All chilled water piping that projects beyond the condensate pan or the optional auxiliary drip pan must be field insulated by others.
- 2. Optional Auxiliary Drip Pan (not shown) is mounted on the outlet side of the drain pan.
- 3. Drain pan is installed with the outlet tube(s) on cooling coil connection end of coil on 4-pipe units with optional opposite end connection.
- 4. Dimensions shown on this drawing apply to standard CW and HW valve packages. Refer to the Piping Package Catalog for valve package code details. Contact factory for details on valve packages using non-standard or customer furnished components.

MODEL THHE
HIGH PERFORMANCE
EXPOSED CABINET FAN COIL UNIT

NOTES:

- 1. Table applies to 1/2" and 3/8" tube diameters.
- 2. Number of circuits does not affect Coil connection size.

GUIDE SPECIFICATIONS

GENERAL

Furnish and install Titus Model THH Horizontal Concealed Direct Drive Fan Coil Units where indicated on the plans and in the specifications. Units shall be completely factory assembled, tested and shipped as one piece. All units shall be capable of meeting or exceeding the scheduled capacities for cooling, heating and air delivery. All unit dimensions for each model and size shall be considered maximums. Units shall be ETL listed in compliance with UL/ANSI Standard 60335, and be certified as complying with the latest edition of AHRI Standard 440. Unit shall be produced in a facility found to conform to the Quality Management System standard: ISO 9001:2015.

CONSTRUCTION

All unit chassis shall be fabricated of heavy gauge galvanized steel panels. All exterior panels shall be insulated with 1/2" thick fiberglass insulation with a maximum k value of .24 (BTU • in) / (hr • ft2 • °F) and rated for a maximum air velocity of 5000 f.p.m. Insulation must meet all requirements of ASTM C1071 (including C665), UL 181 for erosion, and carry a 25/50 rating for flame spread/smoke developed per ASTM E-84, UL 723 and NFPA 90A.

Option: Provide foil-faced insulation in lieu of standard. Foil insulation shall meet or exceed the requirements stated above, and in addition meet ASTM Standards C-665 and C-1136 for biological growth in insulation. Insulation shall be lined with aluminum foil, fiberglass scrim reinforcement, and 30 pound kraft paper laminated together with a flame resistant adhesive. All exposed edges shall be sealed to prevent any fibers from reaching the air stream.

Option: Provide Elastomeric Closed Cell Foam Insulation in lieu of standard. Insulation shall conform to UL 181 for erosion and NFPA 90A for fire, smoke and melting, and comply with a 25/50 Flame Spread and Smoke Developed Index per ASTM E-84 or UL 723. Additionally, insulation shall comply with Antimicrobial Performance Rating of 0, no observed growth, per ASTM G-21. Polyethylene insulation is not acceptable.

All concealed units shall have a minimum 1 1/4" duct collar on the discharge. Plenum units shall have a minimum 1" duct collar on the return.

Option: For concealed units, provide a hinged bottom access panel either solid or with bottom return single deflection grille. A telescoping plenum section is available with bottom return option.

All exposed units shall have exterior panels fabricated of galvannealed steel.

Option: For exposed units, the side and bottom access panels shall be attached with quick open fasteners to allow for easy removal and access for service.

Option: For exposed units, provide double deflection discharge grille and either a rear return or bottom return single deflection grille, powder coat painted to match unit color. Supply and return duct connections are available.

Unit mounting shall be by hanger holes provided at a minimum of four locations.

SOUND

Units shall have published sound power level data tested in accordance with AHRI Standard 260-01.

FAN ASSEMBLY

Unit fan shall be a dynamically balanced, forwardly curved, DWDI centrifugal type constructed of 18 gauge zinc coated galvanized steel for corrosion resistance. Motors shall be high efficiency, permanently lubricated sleeve bearing, permanent split-capacitor type with UL and CSA listed automatic reset thermal overload protection and three separate horsepower taps. Single speed motors are not acceptable.

The fan assembly shall be easily removable for servicing the motor and blower at, or away from the unit. The entire fan assembly shall be able to come out of the unit by removing four nuts per fan and unplugging the motor(s). Plenum unit fan assemblies shall be easily serviced through the filter opening or through the bottom panel.

Option: Provide an electronic (SCR) fan speed controller as an aid in balancing the fan capacity. The speed controller shall have a turn down stop to prevent the possibility of harming the motor bearings, and incorporate electrical noise suppression to minimize noise on the incoming power lines. The SCR fan speed controller is only available for high speed setting.

Option: Provide Electronically Commutated (EC) Motor capable of operation with 3 speed thermostat.

Option: Provide Electronically Commutated (EC) Motor capable of operation with 3 speed thermostat. Each speed shall be manually adjustable in the field. All manual speed adjustments shall be stored in non-volatile memory.

Option: Provide Electronically Commutated (EC) Motor capable of variable speed operation. Motor shall be capable of accepting a 2-10 VDC output from BAS.

COILS

All coils shall be AHRI 410 certified and tagged with an AHRI 410 label.

All cooling and heating coils shall optimize rows and fins per inch to meet the specified capacity. Coils shall have seamless copper tubes and shall be mechanically expanded to provide an efficient, permanent bond between the tube and fin. Coil tubes shall be 3/8" outside diameter with .012" tube wall thickness. Fins shall have high efficiency aluminum surface optimized for heat transfer, air pressure drop and carryover.

All coils shall be hydrostatically tested at 450 PSIG air pressure under water, and rated for a maximum of 450 PSIG working pressure at 200°F.

Steam coils shall be standard steam type suitable for temperatures above 35°F and 15 PSIG maximum working pressure.

All coils shall be provided with a manual air vent fitting to allow for coil venting.

Option: Provide coil tubes with 1/2" outside diameter and .016" tube wall thickness.

Option: Provide coil tubes with 1/2" outside diameter and .025" tube wall thickness.

Option: Provide automatic air vents in lieu of manual air vents.

Cooling and heating coils shall be in a common tube sheet. Heating coils shall be furnished in the reheat or preheat position.

GUIDE SPECIFICATIONS

DRAIN PANS

Primary condensate drain pans shall be single wall; heavy gauge galvanized steel for corrosion resistance, and extend under the entire cooling coil. Drain pans shall be of one-piece construction and be sloped for condensate removal.

The drain pan shall be externally insulated with a fire retardant, closed cell foam insulation. The insulation shall carry no more than a 25/50 Flame Spread and Smoke Developed Rating per ASTM E-84 and UL 723 and an Antimicrobial Performance Rating of 0, no observed growth, per ASTM G-21.

Option: Provide a single wall primary drain pan constructed entirely of heavy gauge stainless steel for superior corrosion resistance. Stainless steel drain pans shall be externally insulated and meet or exceed the requirements stated above.

Option: Provide a secondary drain connection on the primary drain pan for condensate overflow.

Option: Provide a condensate overflow switch in the primary drain pan for condensate overflow.

FILTERS

All plenum and exposed units shall be furnished with a minimum 1" nominal glass fiber throwaway filter. Filters shall be tight fitting to prevent air bypass. Plenum and exposed unit filters shall be easily removable from the bottom of the unit without the need for tools.

Option: Provide unit with 1" or 2" pleated filters rated at 25-30% efficiency at MERV 8 or MERV 13 based on ASHRAE 52.2 - 1999.

MIXING BOX SECTION

Provide a fully insulated integral mixing box section with return and outside air dampers, including the interconnecting damper linkage. Mixing box section shall be shipped attached to the concealed plenum unit as an assembly.

Option: Factory-provided damper actuator to be mounted and wired to control enclosure.

ELECTRICAL

Units shall be furnished with single point power connection. Provide an electrical junction box with terminal strip for motor and other electrical terminations. The factory mounted terminal wiring strip consists of a multiple position screw terminal block to facilitate wiring terminations for the electric control valves and thermostats.

ELECTRIC HEAT

Furnish an electric resistance heating assembly as an integral part of the fan coil unit, with the heating capacity, voltage and kilowatts scheduled. The heater assembly shall be designed and rated for installation on the fan coil unit without the use of duct extensions or transitions, and be located in the unit as to not expose the fan assembly to excessive leaving air temperatures that could affect motor performance.

The heater and unit assembly shall be listed for zero clearance and meet all NEC requirements, and be ETL listed with the unit as an assembly in compliance with UL/ANSI Standard 60335.

All heating elements shall be open coil type Ni-Chrome wire mounted in ceramic insulators and located in an insulated heavy gauge galvanized steel housing. All elements shall terminate in a machine staked stainless steel terminal secured with stainless steel hardware for corrosion resistance. The element support brackets shall be spaced no greater than 3-1/2" on center. All internal wiring shall be rated for 105°C minimum.

All heaters shall include over temperature protection consisting of an automatic reset primary thermal limit and back up manual secondary thermal limit. All heaters shall be single stage unless noted otherwise on the plans.

All units with electric heat shall be provided with an incoming line power distribution block, designated to accept single point power wiring capable of carrying 125% of the calculated load current

PIPING PACKAGES

Provide a standard factory assembled valve piping package to consist of a 2 or 3 way, on/off, motorized electric control valve and two ball isolation valves. Control valves are piped normally closed to the coil. Maximum entering water temperature on the control valve is 200°F, and maximum close-off pressure is 40 PSIG (1/2"), 20 PSIG (3/4"), or 17 PSIG (1"). Maximum operating pressure shall be 450 PSIG.

Option: Provide 3-wire floating point modulating control valve (fail-in-place) in lieu of standard 2-position control valve with factory assembled valve piping package.

Option: Provide high pressure close-off actuators for 2-way on/off control valves. Maximum close-off pressure is 50 PSIG (1/2"), 25 PSIG (3/4"), or 20 PSIG (1").

Option: Provide either a fixed or adjustable flow control device for each piping package.

Option: Provide unions and/or pressure-temperature ports for each piping package.

Piping package shall be completely factory assembled, including interconnecting pipe, and shipped separate from the unit for field installation on the coil, so as to minimize the risk of freight damage.
