

# HELIOS

The Helios VAV Diffuser is a revolutionary leap forward in air distribution technology. Equipped with the same light-powered energy-harvesting technology used on our ground-breaking EOS diffusers, it is designed to improve comfort and save energy by providing a solution to challenging VAV system applications.

#### A few of the features that make Helios a great product include:

- It uses EnOcean technology
- It uses ambient light energy for self-powering capability
- It requires no building power
- Installation is simple and easy
- It requires no complicated cabling or wiring

#### Other functional features include:

- Heating & cooling temperature setpoints
- Minimum damper position setting (0-35%)
- Supply air and room air temperature measurement
- Hardware self-testing
- 3 week power storage

With growing concerns around energy usage, it just makes sense to include this innovative new diffuser as part of your building's energy efficient profile. Utilizing such a simple abundant resource as light, your comfort will not have to cost you. The energy efficient HVAC market now has a truly smarter diffuser that combines intelligence with flexibility, adjustability, and dependability.

Helios. Another mark of innovation to help you **"Redefine Your Comfort Zone"**.
