

Seismic Rated Terminal Units

Safety is our First Thought

Catastrophic events such as earthquakes can happen at a moment's notice leaving damage that could cause serious bodily harm and cost thousands of dollars to fix. Titus has done its due diligence to ensure our terminal units are ready should such an event take place.

In order to meet continuing requirements with product compliances, we are pleased to introduce Seismic Certification Compliance on the ESV, EDV, TFS and TFS-F unit models. These models will be certified per (IBC) International Building Code and (OSHDP) Office of Statewide Health Planning and Development. More medical facilities are requiring this certification to ensure that equipment will remain functional after experiencing a seismic event. The Titus terminal unit models will be certified with the following options:

- » Hot water / Electric reheat
- » PSC & ECM motor
- » All liner types currently available
- » All current motor and heater voltages and kilowatt offerings

Titus recognizes the importance of complying with new codes being adopted in different regions to ensure we continue to Redefine your comfort zone.
