### **Titus HVAC unveils industry's first light-powered digital diffuser**

*Wireless VAV diffuser simplifies installation, boosts energy efficiency and allows users to control personal comfort*

**PLANO, TX – Jan. 12, 2016** – [Titus HVAC](#), a world leader in air distribution, has elevated comfort control and energy efficiency to new heights with Helios, the HVAC industry's first digital diffuser that is powered by both ambient light and direct sunlight. The variable air volume (VAV) diffuser can be used with thermostats and is completely wireless, enabling maximum comfort, greater efficiency and simplified installation.

Typically, VAV diffusers must be connected to an outside power source such as a building's power supply, leading to decreased energy efficiency. Beyond the energy losses, the connections create headaches for contractors because they also require cables and cords that complicate and hinder system installations. Helios eliminates both of those issues because it's wireless and is equipped with a solar cell that can be charged by ambient light and direct sunlight.

"Titus has always pushed the boundaries of air distribution innovation," said Derrick Smith, product manager, terminal units and underfloor air distribution, Titus HVAC. "We've continued that tradition through the introduction of Helios, the industry's first-ever light-powered digital diffuser, which sets a new benchmark for personal comfort and energy efficiency."

Helios VAV diffuser is ideal for office, healthcare and education applications. They will be available for purchase in spring 2016.

**About Titus**

As the world leader in advancing the science of air distribution and air management training, Titus works to make life better by improving the health, efficiency, sustainability, comfort and aesthetics in commercial building environments. Founded in 1946, Titus, an integral piece of Johnson Controls Building Efficiency division, provides a breadth and depth of air management products and design tools that includes displacement ventilation, chilled beams, underfloor, grilles, diffusers, terminal units, fan coils and advanced training.
