

AG-125

- Two sets of independently adjustable blades in one damper. The air-entering set deflects air from the main duct into the take-off. The air leaving the unit equalizes airflow into the diffuser.
- A suffix "S" on the model number denotes blades parallel to the short dimension, "L" denotes blades parallel to the long dimension
- Extruded aluminum blades, steel frame

AG-125

air balancing

MODEL:

AG-125

FINISH:

Standard Finish - #04 Mill

See website for Specifications

OVERVIEW

Double Blade

Effective air balancing begins with the balancing provisions that are designed into the HVAC system. Titus balancing devices are easy to select and specify. They are designed for quick access and adjustment and are engineered for the least possible noise, turbulence and air resistance. Titus makes available published flow factors for all Titus diffusers. This allows precision balancing to be performed in the field with accuracy based on prior test results.

Note: Model AG-125 is for TDC diffusers only
